DETAILED OFFICE ACTION

Allowable Subject Matter

Claims 1-4 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, *in combination with other limitations recited in the claims*, the limitations of a sequential segment joining stator coil, particularly, comprising the following:

in-phase slot groups are provided for each pole, each including a plurality of in-phase slots forming the slots accommodating the in-slot conductor portions for making the phase windings in phase with each other, with the plurality of in-phase slots being continuously arranged in circumferential directions for each pole, and

the conductor accommodation positions of each of the slots are divided into r conductor accommodation position sets,

wherein r is determined as $r = s/t$, (where t is an integer)

wherein each set composed of the t conductor accommodation positions continuously located in the radial directions, and

the in-phase slots of the in-phase slot groups identical in order when viewed from one of the circumferential directions accommodate a partial coil in each of the conductor accommodation position sets, and

the phase winding is constructed in a manner such that radial series coils formed by connecting the partial coils in the conductor accommodation position sets different from each other in series to each other through an inter-layer connection line, which are equal in number to the in-phase slots of the in-phase slot group, are connected in parallel with each other.

Comparing to the prior-art of the record, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.
